

LPG Solutions

Your Safe, Clean and Economical Solution

- EQUIPT makes sure to offer the best LPG solutions by offering Antonio Merloni's LPG tanks which is the European leader in the manufacturing of LPG products in compliance with the highest quality standards. The range of products includes both above ground tanks and underground tanks from 500 liters to 5000 liters depending on customer's request.
- All LPG tanks are specially treated with an epoxy layer that serves for isolation purposes and prevents all harmful chemical-physical reactions that may occur between the tank and the environment. In addition, they are all equipped with a safety valve, gaseous phase delivery service unit, liquid phase delivery valve, level indicator and filling valve to ensure maximum safety for the consumer.
- As an additional safety measure, all underground tanks are offered with a cathodic and anodic protection package lying in a marsupio cover to increase the level of protection against corrosion in harsh environment and to protect the painting of the tank from getting scratched while buried underground.
