## **IPT - UN WFP: Providing Fuel for Health, Water and Sanitation Services**

As part of a long-term emergency plan, IPT continues to operate with the UN WFP to provide fuel for health, water, and sanitation services in all Lebanese regions. Once more, IPT proves its resilience and trustworthiness in crisis management. The World Food Program (WFP), the global United Nations humanitarian lead on logistics, chose IPT as a local partner to implement a fuel supply plan aiming to mitigate additional suffering caused by the crisis. ### Control your fuel expenses

The "IPT Prepaid Fuel Card" is a fast, safe, and secure way to pay on the go. Apply now by filling [form](#). Click [here](#) for more information about IPT Prepaid Card.

## #Energy\_Library

"As the world rushes to develop hydrogen technologies in all their colors - green from renewable energy sources, blue from natural gas sources or others with carbon capture and storage systems, gray and yellow, and others - the question of Lebanon's role in this race to protect it from the evil of deep slumber remains unanswered. How's it doing with the awakening?"

## ✓ SAVE ENERGY EVERYDAY

**Myth:** You can save money on heating bills by closing heating vents in unoccupied rooms.

**Fact:** The only effect closing heating vents in one room will have on your system is to redirect air to other vents in the house. If there are any leaks or weak points in your duct work, they can be made worse by closing the vents in one room. We recommend keeping all of your vents open to prevent back pressure from being applied to your system's fan, which can significantly reduce efficiency.
